

"Rally to Stop Genocide." The murder, rape, and torture that have occurred—and still occur—in Sudan must stop.

In July of 2004, the House of Representatives and the Senate declared that the atrocities occurring in the Darfur region of Sudan constituted genocide. On September 9, 2004, Secretary of State Colin Powell declared that "genocide has been committed in Darfur, and that the government of Sudan and the Janjaweed bear responsibility." It is estimated that 200,000 people were killed by government forces and militias from 2003 through 2004, and an additional 200,000 people died as a result of the deliberate destruction of their homes and livelihoods.

Nevertheless, almost two years later, these atrocities continue unabated. The government of Sudan continues to carry out air strikes against civilians in Darfur, and the Janjaweed militias, with the support of the government, continue to terrorize the people of Darfur.

Earlier this year, I traveled to Sudan as part of a bipartisan congressional delegation led by my good friend from California, Minority Leader Nancy Pelosi. We visited the camps. As far as the eyes could see, there were crowds of displaced people who had been driven from their homes, living literally on the ground with little tarps just covering them. It is unconscionable that this should continue.

Our delegation also met with Sudanese Vice President Taha. He was unapologetic, he was arrogant, and he was uncompromising on their position in Darfur. Sudanese government officials don't like the use of the word "genocide," but Vice President Taha admitted that they had funded the Janjaweed in order to retaliate against the rebels of the south who were resisting the Sudanese government.

There can be no doubt that what is taking place in Darfur is genocide, and the government of Sudan is responsible. There are two million displaced people in camps in Darfur and another 200,000 in camps in neighboring Chad. Each month, it is estimated that another 6,000 people die.

On April 5, 2006, the House of Representatives passed H.R. 3127, the Darfur Peace and Accountability Act. This bill imposes sanctions on the government of Sudan and blocks the assets and restricts travel for individuals who are responsible for acts of genocide, war crimes or crimes against humanity in Darfur. I urged my colleagues to support this bill, which passed the House by an overwhelming vote of 416 to 3. This legislation was long overdue.

The world stood by and watched the genocide that occurred in Rwanda. The world has noted over and over again the atrocities of the Holocaust. Yet we cannot seem to get the international community to move fast enough to stop the genocide that is taking place in Darfur.

The world cannot continue to turn a blind eye to genocide when it is staring us in the face. We must put an end to these atrocities, or millions more will die.

Mr. Speaker, I urge my colleagues to encourage and support the work done by advocacy groups such as Teens Against Genocide and to continue legislative action to stop these crimes against humanity.

ENERGY PRICES IN AMERICA

The SPEAKER pro tempore. Under the Speaker's announced policy of Jan-

uary 4, 2005, the gentleman from Iowa (Mr. KING) is recognized for 60 minutes as the designee of the majority leader.

Mr. KING of Iowa. Mr. Speaker, I very much appreciate the privilege to address you. In addressing you, I recognize the American people's ears are tuned as well. It is a precious right we have, our freedom of speech we have in this country, and we exercise it on the floor of this Congress on a regular basis, and I appreciate it on both sides of the aisle.

I came to the floor this evening, Mr. Speaker, to address the energy situation that we have in the United States of America. We have watched our gas prices go up to \$3 a gallon and more in the last few weeks. There was a time when it was headed in that direction, and it headed back down again, and now it is back up, and who knows where it is going to stop. We never know where it is going to stop.

The American people are concerned about this, Mr. Speaker, and they should be. We have debated energy on this floor many, many times, and we have kicked back and forth issue after issue that has to do with how we are going to provide an adequate energy supply to keep this economy churning.

This economy is churning, Mr. Speaker. It is churning consistently. It has got some really unprecedented growth. Ten of the last eleven succeeding quarters have had more than 3 percent growth in our gross domestic product. That is a growth rate that one has to go back to the early Reagan years to match.

Yet this growth rate that we have in this environment, this more than 3 percent growth of our gross domestic product for 10 of the last 11 succeeding quarters, or preceding quarters, is matched back to those Reagan years. But in those years, we were under high inflation, high unemployment and high interest rates.

□ 1900

It was a lot harder to make a predictable profit back in those early years than it is in this environment. Today, this is 3 percent growth-plus. It is more than 3 percent growth, but we are doing this in an environment of relatively low interest rates and lower unemployment rates and lower inflation rates. So this economy has had perhaps the longest run and been the healthiest economic environment I have seen in my lifetime.

I am thankful President Bush stood up and took the lead after the bursting of the dot-com bubble, which sent the United States toward a recession. As the dot-com bubble burst, we had speculators that were investing in our new technological ability to store and transfer information faster than ever before without regard to what that value was worth in the marketplace. And so the economy, the dot-com bubble burst, and that sent us towards a recession, and some will say in a recession.

And then right in that recession we saw the September 11 attack on the United States, on our financial centers, on the Pentagon, and of course on the plane that crashed in the field in Pennsylvania. And that was an attack, again, on our financial centers with an attempt to cripple our economy. Well, not only did it hit a difficult hard blow to our economy but, at the same time, this Congress made the decision to spend hundreds of billions of dollars in homeland security, so we also had to spend hundreds of billions of dollars in our Department of Defense funding to carry out this global war on terror.

So we increased our spending in defense, we created a Department of Homeland Security, and we dramatically grew the spending in homeland security all at the time when our economy was being compressed and reduced because of the hit on our financial centers of September 11 and because of the bursting of the dot-com bubble. And the vision of President Bush was that we had to cut taxes to stimulate the economy, and so we did that.

We did that in two rounds here in this Congress, Mr. Speaker. And we said today that last year our revenue increase by 14½ percent greater than anticipated, and this year it is going to be double digits again, greater than anticipated. These tax cuts have worked. They have brought us out of this recession that was caused by the bursting of the dot-com bubble and the September 11 attacks.

But into the middle of all of this we have the energy issue, the energy issue that has gas prices up to \$3 a gallon or more as it becomes closer and closer, potentially, to an energy crisis. Now, someone once asked, what is the solution to \$3 gas? All of America is asking that question today. What is the solution to \$3 gas? And some wag responded, well, \$3 gas is the solution to \$3 gas. Now, I am not sure that \$3 gas brings us the answer to this, but I do believe \$4 or \$5 or \$6 gas will bring solutions to a lot of our energy problems in this country and energy problems around the world.

We have been, really, beneficiaries of a fairly cheap fuel over the years. We have had good access to resources here in the United States; and our oil companies, especially American oil companies, have gone overseas, developed the oil supplies in the Middle East, for example, the Libyan oil fields and the Iraqi and Iranian oil fields, and the list goes on. Our American companies have been integral to the development of the oil supply that is coming to the United States today, and that oil is coming out of the ground cheap, and it came to the United States cheap.

Not very long ago we had gas at a \$1.07. I don't remember anyone in America saying since we have such cheap gas prices, we ought to pay a little extra to these oil companies that have invested their capital to go out and drill and explore around the world so that we have an adequate supply of
